

Familiars

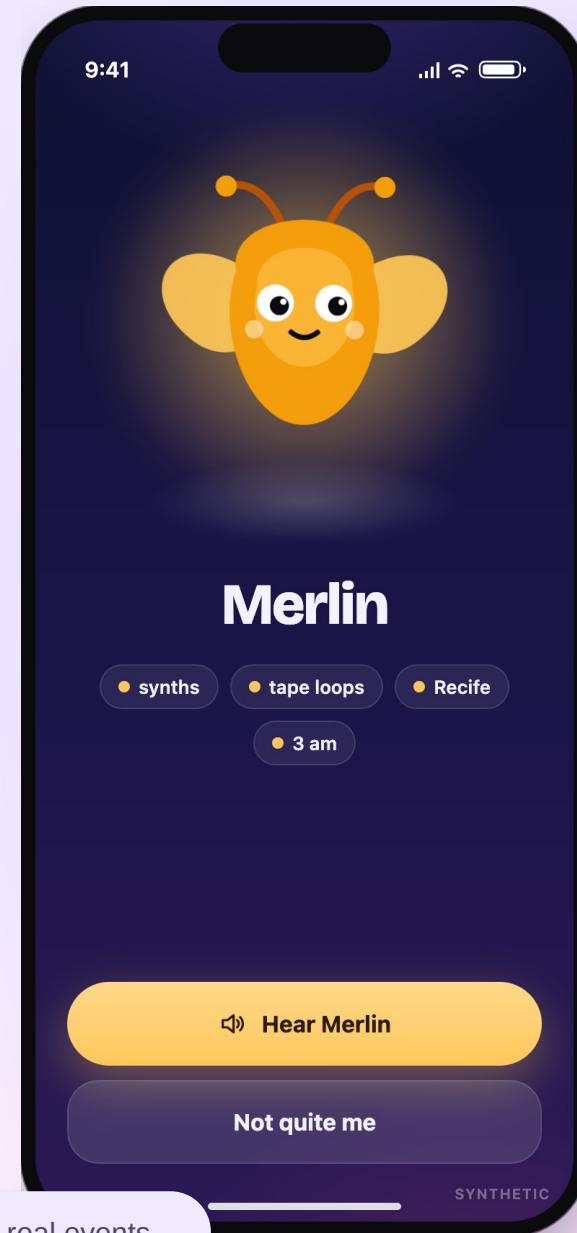

Your familiar meets theirs first.

A small creature, hatched from your voice, that introduces you to people and finds you plans.

K2 Horizon 0.9B per person, 375B for the world

ElevenLabs voice in, voice out

Querit real events

THE PROBLEM

Everyone is in the same room. Nobody sends the first text.

57%

of 44,000 US college students report loneliness.

Trellis, 2024

65%

of students lonely in the latest national survey.

Active Minds · TimelyCare, 2025

70M

daily users at BeReal's peak. A photo had nothing to say.

down to ~3M by 2025

76%

of group plans never leave the chat.

83 messages for the ones that do

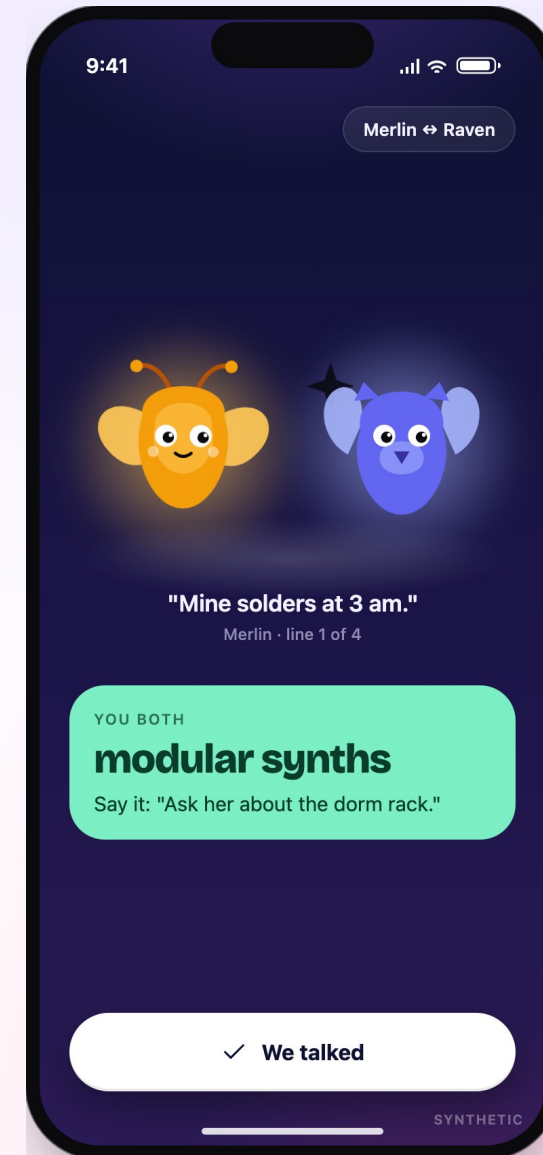

“You can get a meal without talking to another human.” · The Tartan, CMU, 2024

THE IDEA

AI warm intros.

Each person gets a familiar: a small model that runs locally, on their side, and knows only them.

Two familiars meet first. You get one line worth saying.

K2 Horizon 0.9B one per person, local, your own agent

K2 Horizon 375B the shared world: matching, intros, recaps

Say who you are. It hatches from that.

No typing. Name, pronouns, what you make, where you are from: spoken, stuck to the egg, hatched.

ElevenLabs Scribe speech to text while you talk

K2 375B hatches name, keywords, greeting

K2 0.9B your familiar from here on

Wiggle to cast. Tap to catch.

One phone wiggles, the other catches.
The two familiars talk on a stage and hand you the one thing you share.

DeviceMotion the wiggle, matched server-side

K2 0.9B × 2 the two familiars write the duet

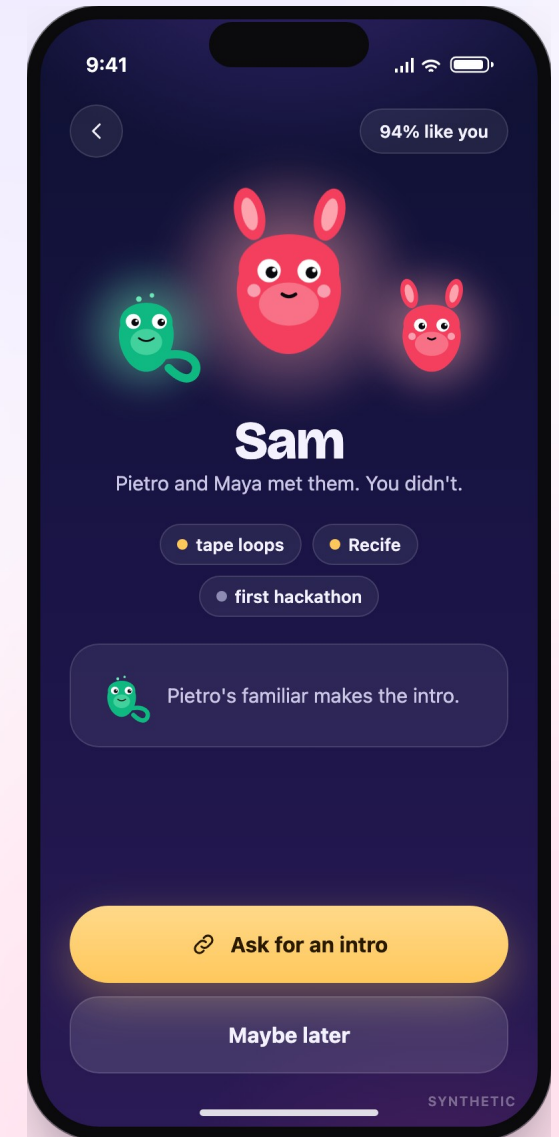

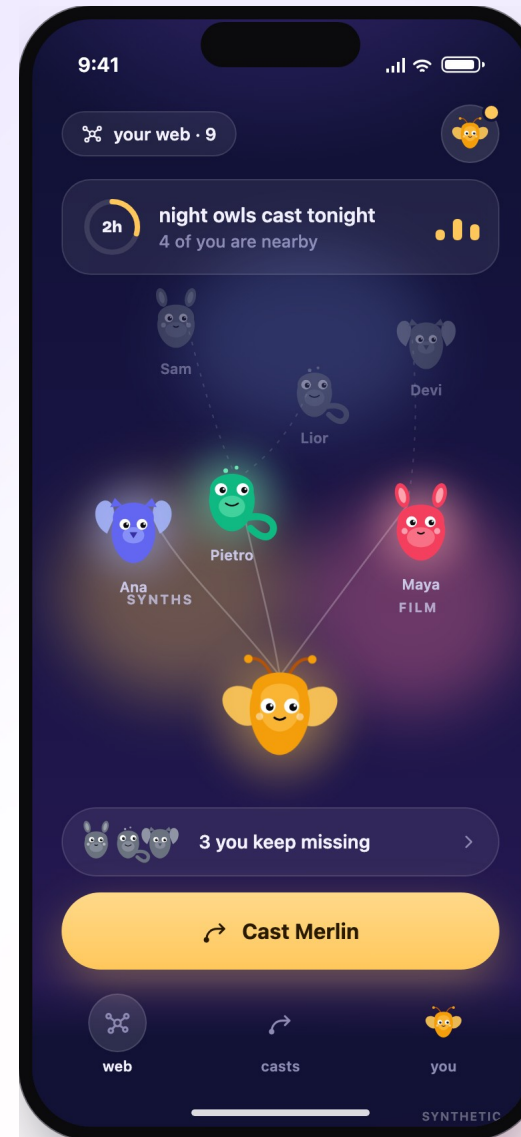

ElevenLabs TTS a voice per familiar

3 · WEB

Home is who you have met.

People stand in the interests you share.
Friends of friends fade upward.

The ones you keep missing get an intro
carried by a friend's familiar.

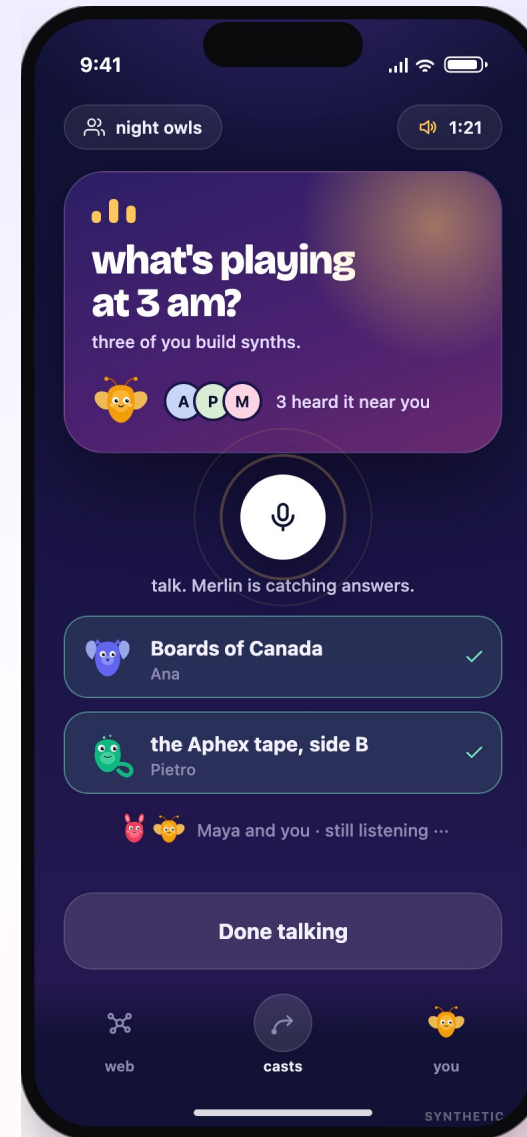

K2 375B groups the web by shared interests, writes the intro line

Next.js · Vercel · MongoDB Atlas one shared room for every phone

One question a day, in your familiar's voice.

It lands on every phone in the circle at the same second. You look up and talk.

Nobody types. The phone listens.

K2 375B writes the question from the circle's interests

ElevenLabs TTS asks it, Scribe listens to the answers

Merlin goes out and finds three. Swipe.

Real events, with the source. When everyone swipes right on the same one, it is a plan.

Querit web search and fetch events

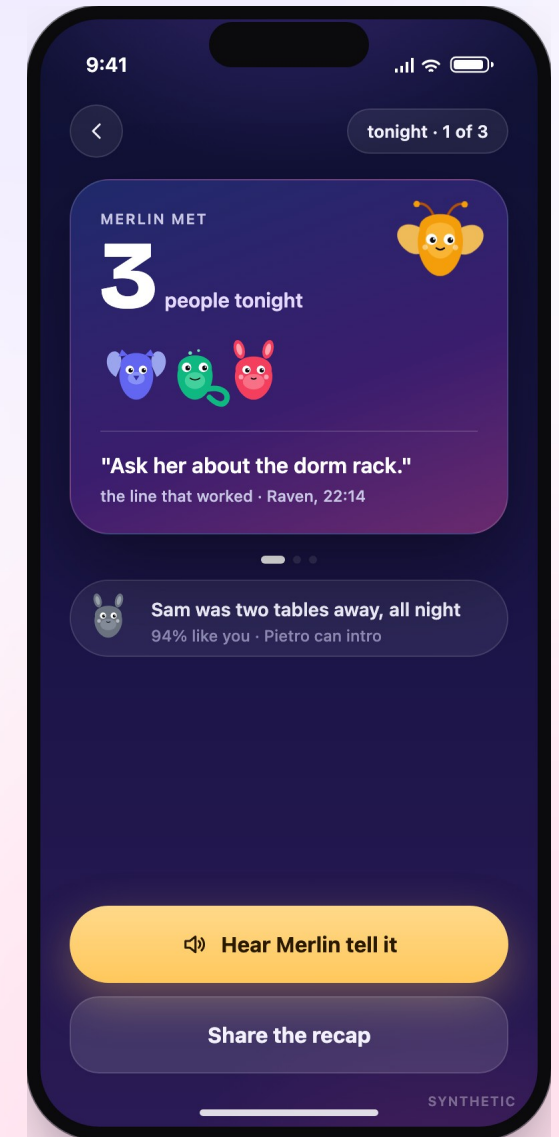

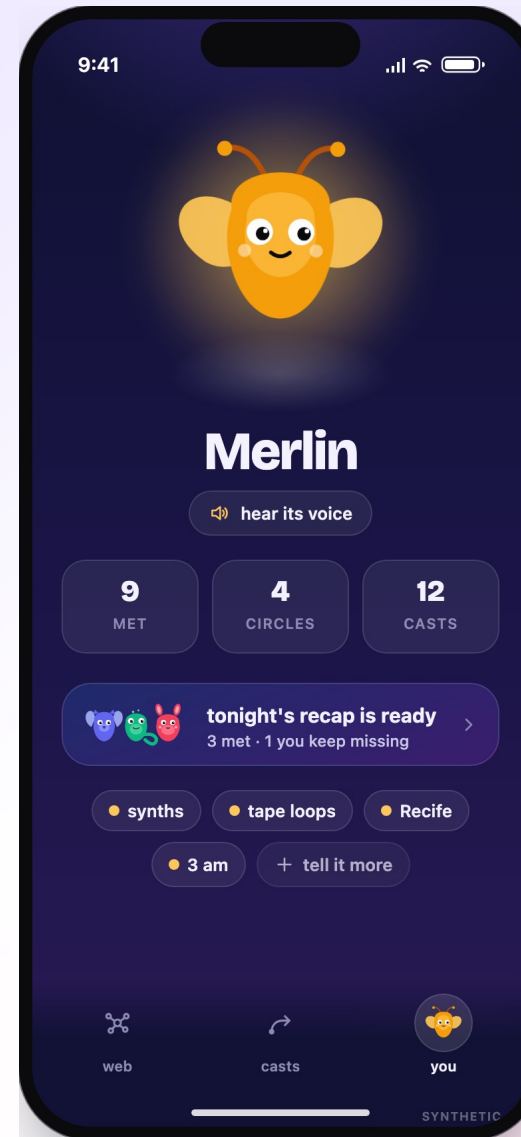

K2 375B plans the queries, extracts the facts

K2 0.9B personal familiar acts on your behalf locally

6 · EVERY NIGHT

Your familiar tells you the story.

Who it met, the line that worked, and the person who was two tables away all night.

K2 375B writes the recap from the day's web

ElevenLabs TTS your familiar tells it

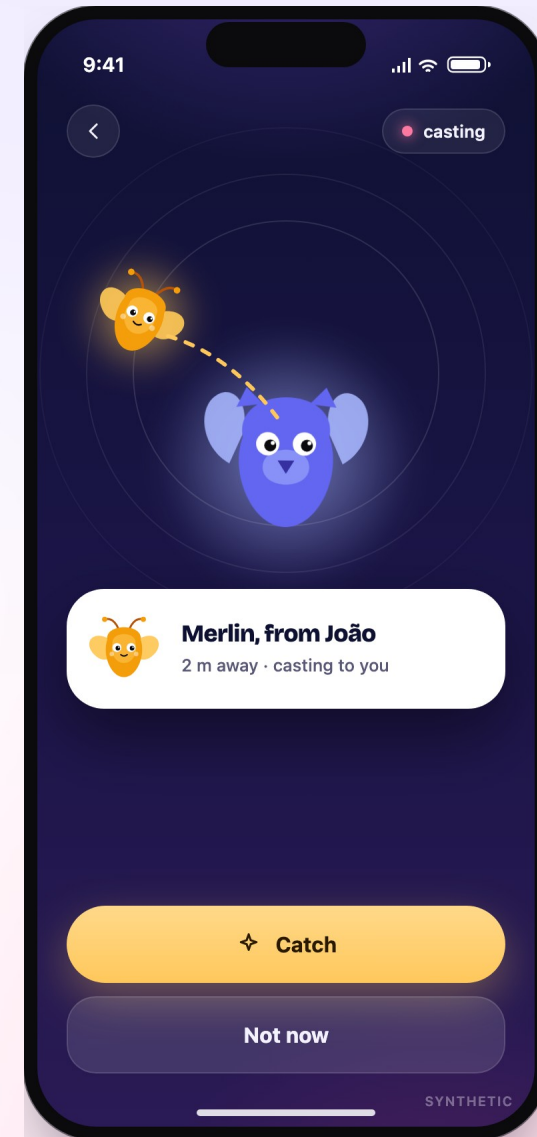

WHY MULTIPLAYER

Nothing here works with one phone.

- The wiggle** needs the other phone to catch.
- The cast** needs the circle to hear the same three notes.
- The plan** needs everyone to swipe right.
- The intro** needs a friend's familiar in the middle.

K2 0.9B one agent per person

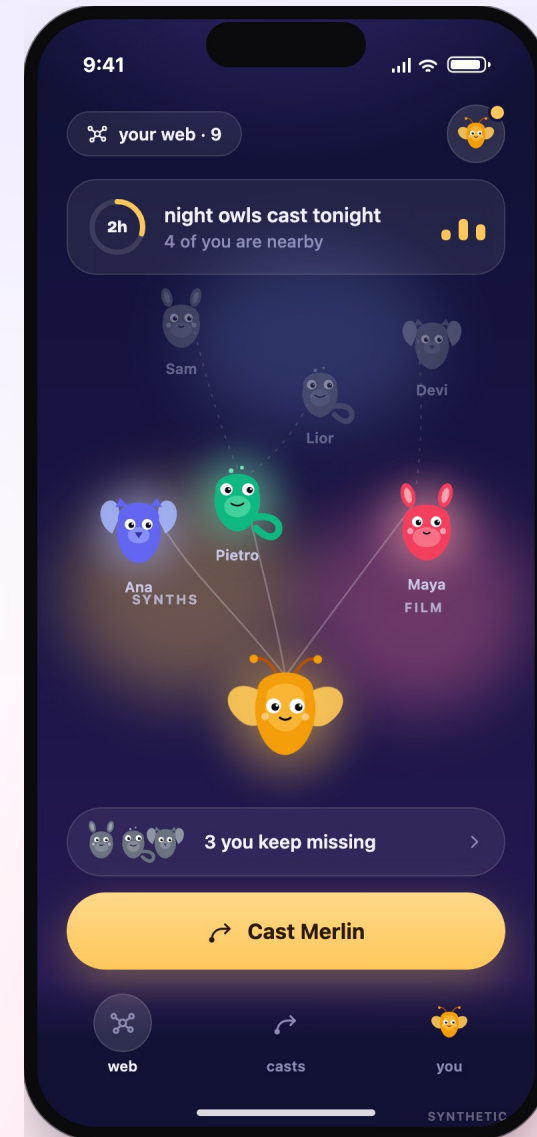

K2 375B the shared world between them

WHAT IS NEXT

Familiars evolve with who they meet.

Your familiar keeps a memory of everyone it meets. Circles get named by what they share. The scout learns which outings happened and finds the next one.

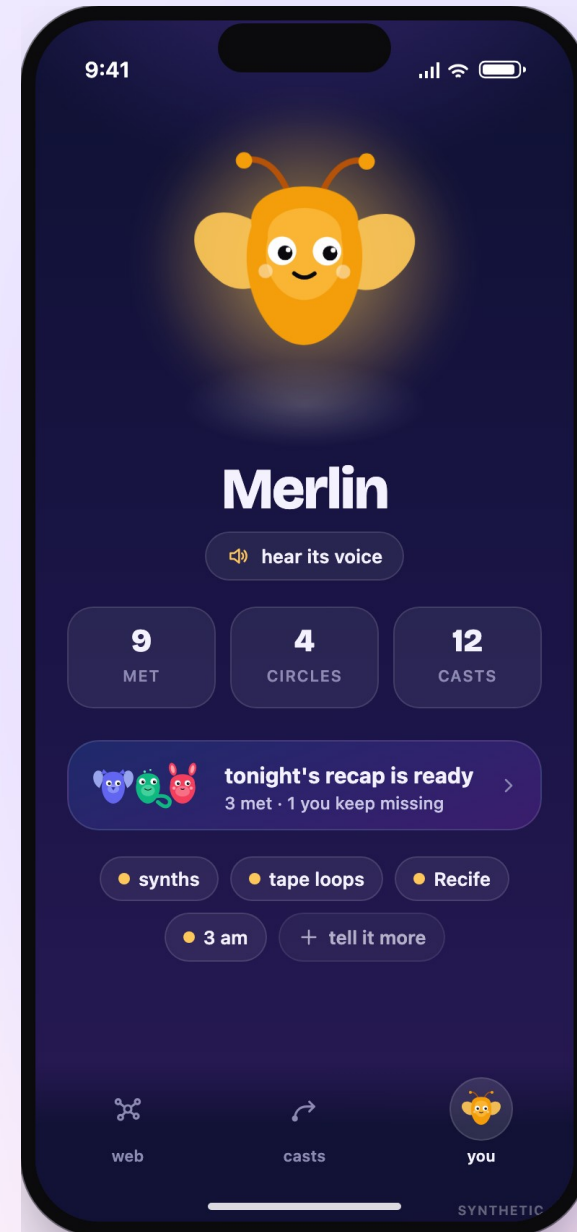

K2 0.9B memory stays on your side

K2 375B learns the room, not the person

Familiars

Meet through your familiar.
